

Barcode Entry Station / Ticket Dispenser

Barcode Entry Station / Ticket Dispenser

Standard Features

- Robust mild steel / stainless steel enclosure with UV resistant acrylic face-plate
- Proven solid reliability
- 7" weather-proof LCD display
 - High brightness, viewable in direct sunlight. Display can be customised to display site logos marketing material or special instructions
 - Displays the name of the access card user as well as a welcome message
 - The display creates a brilliant first impression
- Proximity sensing "no touch" button with colour changing LED's for prolonged usage
- Integrated audio with changeable message welcoming the visitor as soon as the vehicle is detected on the built-in loop detector
- Ticket format code either 1D or 2D barcodes
- Capable of operating on-line or off-line
- Works in conjunction with the Parking Portal where all data is automatically synced and clients are able to obtain all relevant data and information in real-time.
- Actek technical personnel are automatically notified of errors and breakdowns as the majority of errors can be self diagnosed by the system and either be repaired remotely via built-in internet connection, or a field technician be dispatched.

Optional

- Integrated proximity card reader for tenant parkers
- Integrated LPR (License Plate Recognition), links the parking ticket to the registration number of the vehicle. Depending on the software setup the device would not issue a ticket unless if a license plate is detected
- Ticket accepting mechanism, normally used at hotels where the parker uses a parking ticket to enter and exit multiple times. With this option the bezel where a ticket is presented is capable of accepting a ticket and reading the barcode on the ticket to allow entry without the need to generate a new ticket
- Integrated VOIP (Voice over internet protocol) intercom system when used for Pay on Foot or Central Pay parking solutions

Designed and manufactured in South Africa,
for the harsh African environment
